# Multibanking

The Multibanking Service enables TPPs to retrieve and manage PSD2 compliant account movements. With smart analytics, transactions can even be categorized

# Account Information Service

The Multibanking Service allows PSUs to integrate their accounts from different banks into the TPP app

# WHAT WE OFFER

## Account Information Service

Aggregate account information like transactions from different banks

## Encryption of digital data

Encrypted storage of user data

## Smart Analytics

Categorization and analysis of transactions

## Payment Initiation Service

Money transfer from and to different bank accounts

## Contract Recognition

Current contracts are recognized from the account transaction

# The adorsys Multibanking Service

---

The Multibanking Service provides authenticated access to a users bank account. With validated online-banking credentials, the user can authorize an application to fetch transaction data, prepare and display it. Furthermore, it is possible to test the functionality of this project not only with real data, but also with mock data. The mock data can be set up by the user and acts just as real data.
